CYC Turf Paint **TRANSITION**

GENERAL INFORMATION

READ ENTIRE LABEL BEFORE USING THIS PRODUCT

TRANSITION is a premium colorant designed with the purpose of bringing the natural color of turf grass to the next level. Golf course fairways, greens, tees and roughs are prime examples of areas for application. Other areas that **TRANSITION** is designed to enhance are parks, business and residential lawns and athletic fields as well as anywhere turf grass is used to beautify an area. The foundation of **TRANSITION** is build on strategically selected binders and pigments. This optimum formulation will keep the color vibrant and on the turf for longer. The turf grass will not only look good but it will stay healthy with a long term negative impact caused by **TRANSITION** to the grass. Quality of results are influenced by the conditions of the turf area being treated, calibration of equipment and application rates.

DIRECTIONS FOR USE

**DOUE TO VARYING NEEDS AND VARIABLES PLEASE CONSULT
YOUR LOCAL TECHNICAL REPRESENTATIVE OR TURF
SPECIALIST FOR SPECIFIC RECOMMENDATIONS.**

SHAKE OR AGITATE WELL BEFORE MIXING. DO NOT ALLOW TO FREEZE.

For best results of application, cut turf to desired height, remove debris such as clippings, leaves, and worm castings prior to application of **TRANSITION**. Keep in mind product distribution can be affected by the following: nozzle types, system pressure, spray angle and water carrier volume. Over spray on the following areas should be avoided if color is not desired: curbing, concrete, tee markers or other objects. Shake, agitate or stir colorant thoroughly before mixing into tank.

Recirculation/agitation is required prior to and during application.

Tank mixing: Fill tank with half of the total required water, add colorant with tank agitation running, add final half of required water.

Compatibility: Mixing **TRANSITION** with other products containing pigments or colorants is not recommended. Undesired color and performance may result from this. **TRANSITION** may be applied in conjunction with many pesticides and fertilizers. A compatibility test is recommended if the desired combination has not been previously used. In this situation, apply the spray solution to a small test area of turf to determine if outcome is desirable.

Equipment: Prior to and after use of **TRANSITION** all internal and external pieces and parts of equipment should be thoroughly rinsed and washed.

RECOMMENDED RATES

DO NOT change the mix ratio as it can affect the longevity of the product. Calibrate spray solution to attain good coverage and desired color depth. Consulting with your sales / technical representative is strongly recommended for suggested rates as each course faces different variables.

BERMUDAGRASS:

- Spring/Summer: 32 to 128 oz. per acre.
- Summer/Fall: 32 to 64 oz. per acre.

Application rate is dependent on desired color, conditions of turf and amount of existing chlorophyll.
